

THE FORUM SENTRY API GATEWAY SOLUTION

The **Forum Sentry API security gateway** enables code-free building of APIs to integrate legacy and modern systems, connect cloud and mobile technologies, and extend business applications and services securely beyond the enterprise border.

For 15 years, the **Forum Sentry API Gateway** Solution has maintained a 100% deployment success rate for every technology deployment with U.S. Federal agencies, EU governments and global enterprises, providing secure integration across channels, applications and infrastructure. Our dedication to our product success is unmatched in the industry and our deployment success is a testament to the capabilities of the product technology and the support infrastructure behind it.

API Security Management Solutions:

Identity Federation and SSO

- Seamlessly implement Federation, Access Control, and SSO with minimal impact on clients or back-end services
- Combine identity with payload attributes for multi-context and multi-factor authentication
- Built-in support for all modern IdM systems, PKI, and identity formats

API Security

- Build logical APIs with protocol-break, deep-content inspection, and bi-directional information assurance
- Modern information security combining content-aware cyber-security intrusion, data leakage protection, antivirus, access control, and PKI cryptography
- SLA enforcement with real-time monitoring and alerting

Universal Integration

- Point-and-click policy enablement to integrate any combination of SOAP, XML, REST, and JSON transaction paradigms
- Designed by intent to integrate the broadest spectrum of client and server technologies as a seamless intermediary
- Supports all cloud and mobile messaging and protocol standards

Flexible Deployment

Forum Sentry is available in hardware, virtual and software instances.
